

10 Reasons to Change Your Windows and Doors

1. Opening or closing had become hard to do.
2. Drafts can be felt coming in around the windows and doors.
3. Visible damage (There might be chipping, deterioration or water stains around the windows).
4. Single pane windows (Today's windows are made from double or triple pane glass. Single pane glass windows are drafty, and can sometimes be unsafe).
5. Hard to clean.
6. Replacement parts are harder to find or have been discontinued.
7. There is an increase on your energy bill (Older windows and doors lack proper insulation which may force your air conditioning or heating to work harder).
8. Outside noise (If you are hearing outside noise when your windows are closed, chances are they aren't providing enough acoustic insulation).
9. Furniture and window treatments have started to fade. (Single pane glass does the worst possible job at keeping out the UV rays that enter through your windows and can fade colors).
10. They don't look good.
